PM www.math.ucdavis.edu Hilbert spectral analysis Hilbert spectral analysis (HSA) is a method for examining each IMF's instantaneous frequency as functions of time. The final result is a frequency-time distribution of signal amplitude (or energy), designated as the Hilbert spectrum , which permits the identification of localized features. Applied Sciences - hilbert.edu Hilbert-Huang transform (HHT) is a two-step method for analysis of nonlinear and nonstationary signals. The first step is empirical mode decomposition (EMD) that decomposes the original signal into a finite number of intrinsic mode functions (IMFs). IMFs are time-varying mono-component (single frequency) functions. The mathematical concept of a Hilbert space, named after David Hilbert, generalizes the notion of Euclidean space. It extends the methods of vector algebra and calculus from the two-dimensional Euclidean plane and three-dimensional space to spaces with any finite or infinite number of dimensions.
