by Friction Charging by friction between objects of different affinities, causes the object with higher affinity for electrons to gain electrons from the other object. The object that has "lost" electrons now has a positive charge. Chapter 20 Static Electricity Answer Key Figure 20-4 shows static charges—charges that are not moving—on an insulator. The strips of tape that you charged earlier in this chapter acted in the same way. Materials through which charges will not move easily are called electrical insulators. Glass, dry wood, most plastics, cloth, and dry air are all good insulators. Chapter 20: Static Electricity Electric Forces Like charges repel and opposite charges attract.
