Slab Track - an overview | ScienceDirect Topics Slab track, also called ballastless track, is a modern form of track construction which has been used successfully throughout the world for high speed lines, heavy rail, light rail and tram systems. Slab track technology offers proven higher performance in service and a

longer life than traditional ballasted track. Why build slab track? - Britpave The system LVT S& C ensures also within points and junctions, a slab track having homogenous rail riding conditions. The high degree of standardization and the very frequent relinquishing of reinforcement in the 2nd stage concrete make LVT S& C a highly competitive system in all respects. Intense teamwork and strong cooperation between civil engineers and geotechnical engineers is required in order to obtain a reliable design of the slab track systems. Slab track systems on different substructures The Shinkansen slab track (Figure 1, pg. 81) consists of a sublayer stabilised using cement, cylindrical “stoppers” to prevent lateral and longitudinal movement, reinforced pre-stressed concrete slabs measuring 4.93 m x 2.34 m x 0.19 m

(4.95 m x 2.34 m x 0.16 m in tunnels) and asphalt cement mortar injected under and between the slabs. SLAB TRACK Recent developments in slab track Esveld C., Slab track: A Competitive Solution, 1999.
