SERRATIONS A splined shaft is one having a series of parallel keys formed integrally with the shaft and mating with corresponding grooves cut in a hub or fitting; this arrangement is in contrast to a shaft having a series of keys or feathers fitted into slots cut into the shaft. The latter construction weakens the shaft to a considerable degree because of the slots cut into it and consequently, reduces its torque-transmitting capacity.

splines and serrations - Autodesk forums - SLIDELEGEND.COM Creates a smooth curve that passes through or near a set of fit points, or that is defined by the vertices in a control frame. Find SPLINE creates curves called nonuniform rational B-splines (NURBS), referred to as splines for simplicity. Splines are defined either with fit points, or with control vertices. By default, fit points coincide with the spline, while control vertices define a ...
